HOW TO INSTALL DOKUWIKI ON A LAMP

SERVER

Author(s): Louis Ouellet

Today, we'll explore how to set up DokuWiki, a versatile and easy-to-use wiki software, on a LAMP (Linux, Apache, MySQL, PHP) server. This guide is ideal for those looking to create a personal or professional wiki without the complexity of larger platforms.

INTRODUCTION

DokuWiki is a lightweight and flexible wiki software that doesn't require a database, making it a perfect choice for small to medium-sized projects. LAMP servers offer a stable and robust environment for hosting such applications. Let's dive into how you can get your DokuWiki up and running on a LAMP server.

PREREQUISITES

- A LAMP server already set up. - Basic knowledge of Linux commands and Apache configurations. - Access to the command line of your server.

STEP 1: DOWNLOADING DOKUWIKI

First, navigate to DokuWiki's official website to download the latest version. You can use `wget` with the link to the tar.gz file. For example:

```
wget https://download.dokuwiki.org/src/dokuwiki/dokuwiki-stable.tgz
```

STEP 2: EXTRACTING AND PLACING DOKUWIKI FILES

Once downloaded, extract the DokuWiki archive and move it to the desired location in your web server's document root. For instance:

```
tar xvf dokuwiki-stable.tgz
sudo mv dokuwiki-<version> /var/www/html/dokuwiki
```

Replace ``<version>`` with the actual version number of the downloaded file.

STEP 3: SETTING PERMISSIONS

To ensure DokuWiki runs smoothly, set the correct permissions for the DokuWiki directory:

```
sudo chown -R www-data:www-data /var/www/html/dokuwiki
```

STEP 4: CONFIGURING APACHE

Create an Apache configuration file for DokuWiki. Open a new configuration file using your favorite text editor:

```
sudo nano /etc/apache2/sites-available/dokuwiki.conf
```

Insert the following configuration, then save and exit:

```
<VirtualHost *:80>
  ServerAdmin admin@example.com
  DocumentRoot /var/www/html/dokuwiki
  ServerName your_domain.com
  <Directory /var/www/html/dokuwiki/>
    Options FollowSymLinks
    AllowOverride All
```

```
    Require all granted
</Directory>
    ErrorLog ${APACHE_LOG_DIR}/error.log
    CustomLog ${APACHE_LOG_DIR}/access.log combined
</VirtualHost>
```

Enable the new site and restart Apache:

```
sudo a2ensite dokuwiki.conf
sudo systemctl restart apache2
```

STEP 5: FINALIZING THE INSTALLATION

Finally, open your web browser and go to your DokuWiki installation URL. You'll be greeted by the DokuWiki installer, where you can set up your wiki's name, superuser account, and other settings.

CONCLUSION

Congratulations! You've successfully installed DokuWiki on your LAMP server. DokuWiki is an excellent choice for anyone looking for a simple, yet powerful wiki solution. Whether for personal use or within an organization, it offers a range of features and a user-friendly experience.
