

Adding New Features: Updates to Writr v2024-11-12

Author(s): Louis Ouellet

In this update, I'm thrilled to introduce some new features to the Writr theme, aimed at enhancing functionality and user experience. Each addition was thoughtfully crafted, and I hope these features will provide you with greater ease and enjoyment.

Bookmarking

A much-requested feature, bookmarking, is now available in Writr! With the [Starred](#) plugin, you can save articles of interest for easy access later. Simply click on the star icon in the page tools to bookmark an article. Bookmarked articles will be saved to your account, and if you enable the bookmark menu in the toolbar, you'll have instant access to all your saved items.

Custom User Page

I'm also introducing custom user pages to make your profile more personal and engaging. Using the [UserPage](#) plugin, you can create a unique page to showcase your profile picture, bio, and social media links. This space is yours to personalize and share, adding a social dimension to Writr.

Conclusion

These new features are a reflection of my commitment to improving Writr and enhancing your experience. If you have feedback or ideas for further improvements, I'd love to hear from you in the comments below.
