INI Configurator

Author(s): Louis Ouellet

INI Configurator is a lightweight and user-friendly GUI application designed for configuring .ini files. The application allows users to seamlessly edit and manage configuration settings with a collapsible section-based interface, ensuring clarity and simplicity even with complex configuration files. The source code may be used to build similar applications for other configuration files.

Features

- **Dynamic Configuration Editor:** Load, edit, and save my.ini configurations directly through the GUI.
- **Collapsible Sections:** Each configuration category is organized into collapsible sections for better organization and ease of navigation.

- **Customizable Fields:** Supports text inputs, dropdown selections, and folder path selection with default values.

Technology Stack

- **Python:** A simple yet powerful programming language used to build the core application logic.
- **PyQt5:** A modern GUI framework used for creating a visually appealing and responsive user interface.
