

02.06. Content Width

The width of the content area can be adjusted with the `content_width` variable in the `style.ini`. Since DokuWiki version 2015-08-10 "Detritus" you can do that more easily with the [styling plugin](#) over the admin interface. This is limited to px size.

Full Width

If you enable `makeFullWidth` in the template's configuration, `Writr` will use `content_border` as the right border of the content.
