02. CUSTOMIZATION

02.01. SITE IDENTITY

LOGO

You can change the logo, favicon and apple touch icon the [same way as for the dokuwiki template](#).

Namespace Logo

If you enable `doLogoChangesByNamespace` in the template's configuration, Writr will use the closest logo as the site logo. Namespace Logos can be added using the media library. To show a different logo in a namespace, just make sure to add the custom `logo.png` in the namespace. This feature is recursive.

Namespace URL

If you enable `doLogoLinkChangesByNamespace` in the template's configuration, Writr will set the logo's url to the same namespace it found the logo.

SITE TITLE

If you enable `doTitleChangesByNamespace` in the template's configuration, Writr will set the title found in the closest `nstitle.txt` page.

SITE TAGLINE

If you enable `doTaglineChangesByNamespace` in the template's configuration, Writr will set the title found in the closest `nstagline.txt` page.

02.02. NAVIGATION

This templates supports multiple levels of a navigation. For that to work you need to add a page called `topnav` and add a list of links to it. (No other content is supported.) The example in the screenshot uses this as the content for the `topnav` page:

topnav.txt

```
~~NOCACHE~~
* [[:start|Home]]
* [[wiki:DokuWiki]]
* [[wiki:Syntax]]
* [[:Sample Page]]
```

02.03. SIDEBAR

The content of a standard sidebar as configured in [Configuration Setting: sidebar](#) will be added between the navigation and the tools list.

02.04. INCLUDED HOOKS

Include hooks allow you to add additional HTML or PHP to the template without modifying any of the template files themselves. This template supports the [same include hooks as the dokuwiki template](#).

02.05. COLOR SCHEMES

The original WordPress theme came with 6 different colour schemes. Those can easily be achieved by changing the `theme_color` and `theme_color_alt` values in your local `style.ini` to the following:

Color Scheme	theme_color	theme_color_alt
Turquoise	<code>#1abc9c</code>	<code>#16a085</code>
Red	<code>#e74c3c</code>	<code>#c0392b</code>
Purple	<code>#a162ba</code>	<code>#8e44ad</code>
Grey	<code>#95a5a6</code>	<code>#7f8c8d</code>
Green	<code>#2ecc71</code>	<code>#27ae60</code>
Blue	<code>#3498db</code>	<code>#2980b9</code>

This should actually be done in the [styling plugin](#) over the admin interface. No need to go out of your way to edit `style.ini`.

02.06. CONTENT WIDTH

The width of the content area can be adjusted with the `content_width` variable in the `style.ini`. Since DokuWiki version 2015-08-10 "Detritus" you can do that more easily with the [styling plugin](#) over the admin interface. This is limited to px size.

FULL WIDTH

If you enable `makeFullWidth` in the template's configuration, Writr will use `content_border` as

the right border of the content.

02.07. TOOLBAR

If you enable `useToolBar` in the template's configuration, Writr will use a page called `topbar` to setup the toolbar. This toolbar support the same formatting as the Navigation `topnav` page.

topbar.txt

```
~~NOCACHE~~  
* [[info@domain.com]]
```

02.08. TOOLTIPS

If you enable `useToolTips` in the template's configuration, Writr will use create stylish tooltips to replace the default browser tooltips.
