Resolving Taskbar Freezing Issues: A Comprehensive Guide

In this blog post, we delve into a common yet frustrating problem faced by many users: the taskbar freezing issue. This problem is often linked to the Tablet Input Service, also known as the Touch Keyboard and Handwriting Panel Service. If you've encountered this issue, you're in the right place. We'll guide you through the troubleshooting steps to get your taskbar up and running smoothly again.

How to check a hard drive health from the command line

Monitoring the health of your hard drive is a crucial aspect of maintaining your system's integrity and performance. On Linux, the **smartmontools** package includes the **smartctl** utility, which allows you to inspect your hard drive's SMART (Self-Monitoring, Analysis, and Reporting Technology) data to predict drive failure and perform checks.

How to disable Telemetry on Windows 11

Windows 11, like its predecessors, includes telemetry features that collect data on how you use the operating system. While this data is used to improve Windows performance and services,

many users are concerned about privacy and prefer to limit the amount of data shared. This guide will walk you through the steps to disable telemetry features on your Windows 11 system, giving you more control over your data.

How to Uninstall Windows Store on Windows 11

With the release of Windows 11, users have experienced a host of new features and a revamped interface. However, not all components may be necessary for everyone. The Windows Store, while a useful portal for apps and updates, may be something you wish to remove, especially if you're looking for a more streamlined or controlled software environment. Whether for personal preference, to reduce resource usage, or for a corporate setup, uninstalling the Windows Store can be done swiftly using PowerShell. This guide will walk you through the steps to remove the Windows Store from your Windows 11 system.

How to prevent user from signing into a Microsoft Account on Windows 11

With the integration of Microsoft accounts into Windows 11, users have the ability to sync settings, files, and preferences across devices. However, there may be situations where an administrator needs to restrict this capability for security or policy compliance. Whether you're managing a corporate environment or you simply prefer to use local accounts, Windows 11 provides a way to disable the ability to sign in with a Microsoft account. This article guides you

through the steps to configure your system and ensure that users adhere to account policies.

How to disable the Cortana app

Cortana, Microsoft's virtual assistant, is integrated into Windows 10 and Windows 11 to help users with tasks like setting reminders and answering questions. However, not everyone finds Cortana useful, and some may prefer to disable it to increase system performance or maintain privacy. This guide will walk you through the steps to disable Cortana on your Windows device, giving you control over your computing experience.

How to skip the network setup during the initial setup of Windows 11

Setting up a new Windows 11 computer is an exciting process, but not everyone has immediate access to an internet connection. Whether you're in a remote location, having network issues, or you simply prefer to set up your computer without connecting to the internet, Microsoft has included an option within Windows 11 to bypass the network setup during the initial configuration. This can be particularly useful for users who wish to have control over their

network settings or who need to install Windows 11 without being forced to update or sign in to a Microsoft account. In this guide, we'll walk you through the simple steps to skip the network setup and continue with a limited setup.

Writr

This template was converted from the [WordPress theme Writr](#). It was voted for by DokuWiki users from a selection of 19 other WordPress themes to convert.

Description	Bold, minimalist and modern
Author	Louis Ouellet, Anika Henke
Email	louis@laswitchtech.com
Last Update	2024-01-02
Compatible	Jack Jackrum
Download	Download
Bug Tracker	Issues
Source	Source

Donation	Donation
-----------------	--------------------------

Download and Install

Search and install the template using the [Extension Manager](#). Refer to [Template](#) on how to install a template manually.

Features

- Improve the general aesthetic for a more modern look and consistency
- Personalize using template's configurations and template's style configurations
- Support for Bootstrap Icons
- Support for many DokuWiki Plugins (See list below)
- A new toolbar is now available in the template configuration. Based on the original WordPress Theme Writr.
 - A new hook topbar is available to add content to the toolbar. Using the same formatting as topnav.
- A new set of tooltips is now available in the template configuration.
 - If toggled, the template will replace the browser's tooltips for these new ones
- Hide/Show Site-Tools based on user login. (CMS mode)
- Set Logo per namespace
 - If toggled, the template will look for the nearest logo.png file it can find.
- Set Logo's link per namespace
 - If toggled, the template will use the logo's namespace as the link
- Set Site Title per namespace
 - If toggled, the template will use the `nstitle` hook to retrieve the title of the site. If none can be found then the dokuwiki title is used.
- Set Site Tagline per namespace
 - If toggled, the template will use the `nstagline` hook to retrieve the tagline of the site. If none can be found then the dokuwiki tagline is used.

Screenshots

The screenshot displays the LaswitchTech website interface. On the left is a dark sidebar with a logo at the top and a list of navigation links including 'en', 'ADD PAGE', 'Blog', 'Tutorials', 'About', 'Privacy', 'Security', 'Products', 'Tutorials', 'About', 'Privacy', 'Media Manager', 'Uploads', 'Profile', 'Login', and 'Logout'. The main content area features a light blue header with a search bar and a 'ADD PAGE' button. Below this, there are two article previews. The first article is titled 'How to Install DokuWiki on a LAMP Server' and includes a sub-header 'Introduction'. The second article is titled 'Enhancing DokuWiki with an Email Script for the Bureaucracy Plugin' and includes a sub-header 'Enhance your DokuWiki experience with a powerful email script for the Bureaucracy Plugin'. Both articles feature a large illustration of a computer monitor displaying a website, surrounded by various icons representing different technologies and services.

Configuration

- Show the title of the page tools
- Show the title of the site tools
- Show the title of the user tools
- Should the site tools require login
- Should the logo changes be by namespace

Plugins

Bloglinks

For best results, update your configurations with the following:

- `plugin»bloglinks»prev_template = @@TITLE@@`
- `plugin»bloglinks»next_template = @@TITLE@@`

Additionally, you may add the class `truncate` to the `` to truncate the page title. This will truncate the title to a single line that fits within the prev and next buttons.

Include

For best results, add the following configuration files:

[WEBROOT]/conf/plugin_lang/include/en/lang.php

```
<?php
/**
 *
 * English language file
```

```
* @license    GPL 2 (http://www.gnu.org/licenses/gpl.html)
*
*/
$lang['readmore'] = 'Read more';
```

[WEBROOT]/conf/plugin_lang/include/fr/lang.php

```
<?php
/**
 *
 * French language file
 * @license    GPL 2 (http://www.gnu.org/licenses/gpl.html)
 *
*/
$lang['readmore'] = 'Lire la suite';
```

Customization

Logo

You can change the logo, favicon and apple touch icon the [same way as for the dokuwiki template](#).

Namespace Logo

Namespace Logos can be added using the media library. To show a different logo in a namespace, just make sure to add the custom logo.png in the namespace. This feature is recursive.

Navigation

This templates supports multiple levels of a navigation. For that to work you need to add a page called topnav and add a list of links to it. (No other content is supported.) The example in the screenshot uses this as the content for the topnav page:

```
* [[:start|Home]]
* [[wiki:DokuWiki]]
* [[wiki:Syntax]]
```

```
* [[:Sample Page]]
```

```
~~NOCACHE~~
```

Other sidebar content

The content of a standard sidebar as configured in [Configuration Setting: sidebar](#) will be added between the navigation and the tools list.

Note

I haven't tested a sidebar yet since the last various updates I made. I will check it out soon.

Include hooks

Include hooks allow you to add additional HTML or PHP to the template without modifying any of the template files themselves. This template supports the [same include hooks as the dokuwiki template](#).

Colour Schemes

The original WordPress theme came with 6 different colour schemes. Those can easily be achieved by changing the `__theme_color__` and `__theme_color_alt__` values in your local [style.ini](#) to the following:

Colour scheme	theme_color	theme_color_alt
turquoise	#1abc9c	#16a085
red	#e74c3c	#c0392b
purple	#a162ba	#8e44ad
grey	#95a5a6	#7f8c8d
green	#2ecc71	#27ae60
blue	#3498db	#2980b9

This should actually be done in the [styling plugin](#) over the admin interface. No need to go out of your way to edit style.ini.

Note

I will be moving this to themes and setup a custom theme so users can set these colors and other css properties not currently supported by the [styling plugin](#).

Content width

The width of the content area can be adjusted with the `__content_width__` variable in the style.ini. Since DokuWiki version 2015-08-10 "Detritus" you can do that more easily with the [styling plugin](#) over the admin interface.

This is currently limited to px size. Will try to add a full-width option for the template.

Development

Changelog

- [MINOR - Code cleanup](#) (2024/03/07 16:30)

- [Made the editor's toolbar take an entire row](#) (2024/02/27 08:27)
- [Added a space between the icon and the label of the button](#) (2024/02/27 08:27)
- [Fixed an issue when the avatar default size would be changed by setti...](#) (2024/02/26 20:37)
- [MINOR - Fixed email icon in toolbar](#) (2024/02/26 15:26)
- [MINOR - Version upped](#) (2024/02/26 15:12)
- [Fix an issue where the links would not be followed](#) (2024/02/26 15:07)
- [Dropdowns will now close when clicked outside](#) (2024/02/26 14:43)

- [Added and configured 'topbar' hook to support the same formatting as ...](#) (2024/02/26 14:36)

Planning

- Add more fonts (suggestions?)
- Add option to make the content full width
- Add support for Starred Plugin
- Work on the Media Library CSS to make it more consistent
- Add toggle-able sidebar
- Review existing issues
- Investigate an issue with the Struct Plugin
- Revise mobile styling
- Revise responsive styling
